Prompts for Robotic Creatures

Create stunning, high-detail images of translucent and metallic animals.
Use this structure to get cinematic, realistic results with solid black backgrounds.

1. Choose an animal

Start with a specific creature that has a strong shape or presence.
Examples: butterfly, hawk, fish, ant, crab, scorpion, seahorse, dragon.

2. Break the body into materials

- Metallic parts: use terms like

brushed metal, matte alloy, dark steel, chrome plating

- Translucent parts: describe as

glass-like, transparent polymer, crystal segments, resin components

👉 Pro tip: mix both to create a strong visual contrast and focus
(e.g. metal body + glass wings).

3. Add visible internal details

Only for the translucent areas — this makes them come alive. Use:

- glowing circuits, micro-wires, golden gears, LED veins, energy pulses

Include colors for more impact:

- glowing blue, orange, purple, red, cyan, etc.

4. Define the pose or movement

- hovering mid-air, coiled, crawling, mid-flight, resting on a surface, suspended in darkness

This sets the tone and silhouette of your subject.

5. Set the lighting

- rim lighting, dramatic product lighting, soft shadows, high-detail contrast

This sets the tone and silhouette of your subject.

✍️ Copy-and-Use Prompt Template

a robotic [animal] with metallic [parts] and translucent [parts],
revealing [internal detail] glowing in [color],
[pose or movement], placed against a solid black background,
lit with [lighting style], high-detail and realistic

🔬 Example Prompt:

a robotic hawk with brushed titanium wings and a translucent chest plate,
revealing glowing orange circuits and internal servos,
hovering mid-air with wings fully extended,
surrounded by a solid black background,
rim-lit with dramatic edge lighting, cinematic mechanical realism

✨ Keep Exploring

This structure is just the beginning. Don't be afraid to expand, refine, and adapt each prompt to your own creative vision.

Stay curious, keep experimenting, and let your imagination guide you.

Soon, you'll be writing cinematic prompts like:

a translucent mechanical butterfly in mid-flight, wings made of thin crystalline material with refractions, detailed robotic body featuring exposed circuits, micro LEDs glowing in purple and blue, visible wiring, chrome-plated legs and antennae, photographed with a macro lens, dramatic dark background with rim lighting, high-detail cinematic realism

Your next masterpiece is just one idea away.

👉 Remember:

It's important to understand that AI tools don't give us final results — they're just tools to enhance our work. This prompt can be modified to fit your needs. If you don't get a great result, I recommend making adjustments in Photoshop.

Hope this helped you out 🙌🙌
